
IT Budgeting [1]

Establish and implement practices to prepare a budget reflecting the priorities established by the enterprise's portfolio of IT-enabled investments, and including the ongoing costs of operating and maintaining the current infrastructure. The practices should support development of an overall IT budget as well as development of budgets for individual IT services. The practices should allow for ongoing review, refinement and approval of the overall budget and the budgets for individual IT services.

There are no PSGs published for this topic; however, the topic is under review for future PSGs.
